Changing the Ways to Obtain Parts Lists of AODD Pumps

Thank you for your continuous support to YAMADA.

As we informed in Yamada Bulletin No. 2020-3 issued on June 25th, 2020, the paper-based parts lists have not been supplied with the AODD pump since July 1st, 2020. Instead, we have requested you to obtain the parts lists by going into our website.

However, we are pleased to inform you that you are now able to download the parts lists from the URL/QR codes contained in the carton box.

More specifically, you can access the page 'Data Download' from the URL/QR codes, which enables you to download the operation manuals, the maintenance guides and the parts lists as per photo below from September 1st 2020 onwards.

The screenshot shows the Yamada website interface. At the top left is the Yamada logo. On the right, there are navigation links for 'Product information', 'support', and 'About us'. Below the navigation is a breadcrumb trail: 'HOME > Support > Download data'. The main heading is 'Data download (diaphragm pump)'. Underneath, a message says: 'You can download the Operation Manual and maintenance manual for the diaphragm pump from the button below.' There are three buttons: 'Operation Manual >', 'Maintenance Guide >', and 'Parts list (exploded view of parts) >'. The 'Parts list' button is highlighted with a red box and a red arrow pointing to it. On the right side, there is a vertical red button labeled 'Product inquiry'. On the left side, there is a sidebar menu with 'support' and sub-items: 'Product catalog download', 'Download data', and 'Notes on using PDF / CAD data'. Below the sidebar menu is a 'Click here for product catalog' link with a small image of a product catalog.
