Release of New Air Operated Lubricators SKR/ SGR Series!

Thank you for your continuous support to YAMADA.

We are very pleased to inform you that our air-operated lubricators have been newly designed for quality improvement! Please refer to the table below for comparison of the existing and redesigned models.

Conventional Models		New Models	
881190	SKR-55EX	881260	SKR-600
880877	SKR-66		
880631	SKR-110A50	881262	SKR-1100
880267	SGR-55	881261	SGR-600
880635	SGR-110A5	881263	SGR-1100

Also, below show the images of the design changes;

The good news is that the redesigned models offer five key benefits as follows!

1) **Completely redesigned across the board for superior usability**

The new models will be equipped with an ergonomically designed handle and large casters; hence, these units offer effortless maneuverability.

2) **Integrated Cabinet Structure**

Conventionally, SKR-55EX (881190) was a model that didn't allow direct filling of fluids into the cabinet. The newly designed cabinet, including SKR-600 (881260), which is the replacement of SKR-55EX, has made it possible to use it by directly pouring fluids into the cabinet, as well as simply accommodating a standard open-top pail in the cabinet.

3) **Improvement of New SKR Series (Grease)**

The conventional SKR55 has no follower plate and was applicable to only grease NLGL No. 0. In contrast, all the new SKR series will have included follower plates as standard; therefore, all those redesigned models can be used for up to NLGI No. 1.

4) **Improvement of New SGR Series (Oil)**

The traditional SGR series were with the digital meter (686858). However, the new series will come with LBM-GM grip meter (687064), which is more durable and long-lasting than the conventional digital meter (686858).

5) **Air Pressure Control**

The existing SGR-55 series had no air pressure control. On the other hand, all the new models come with an air regulator, enabling you to easily control dispensing pressure and flow rate.

The new lubricators will be available from Oct 1st, 2026, while the production of the exiting models will also be discontinued at the same time. Hence, please be informed the conventional versions will no longer be supplied once the inventories are out.

We will inform you of the prices later once available.
